WITH CORDULA ARANA

How to construct the 12 blue triangles

Photocopy the template on white paper (thicker paper would be best) 3 times. If you do so, you have a white color on the other side and that offers more possibilities for you to explore.

You may laminate them, but that is an option for you, to have the material for a longer time.

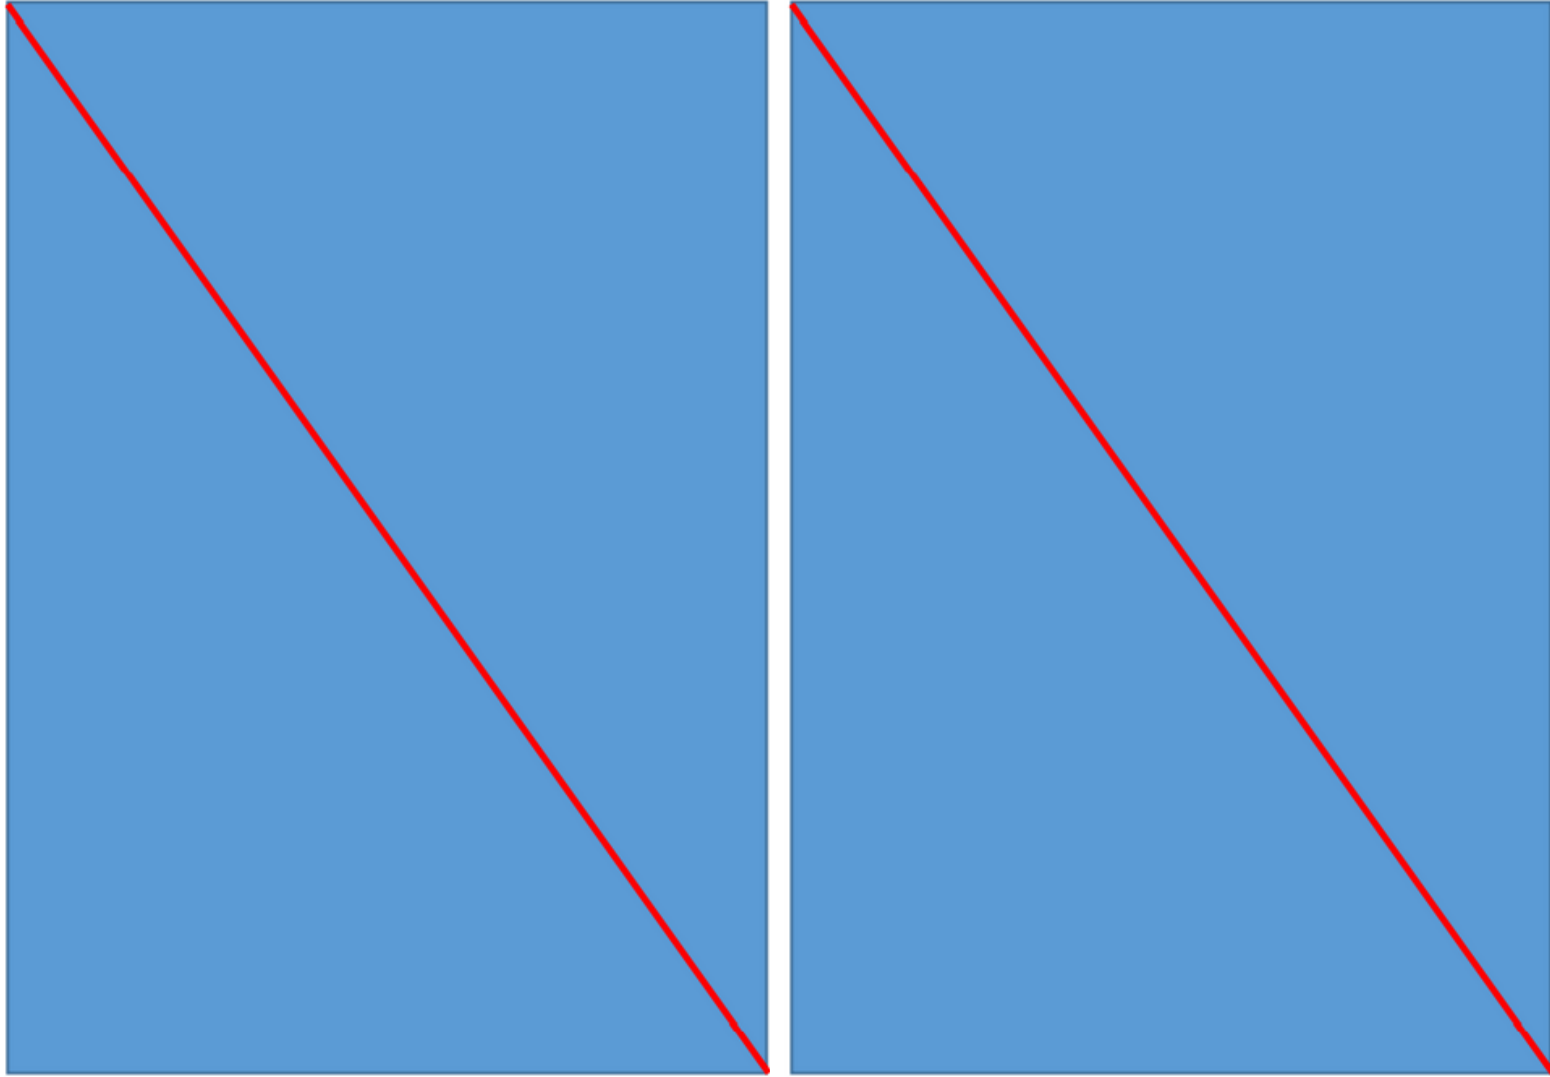

Cut out, so that you receive 12 right-angled scalene triangles (you just need to cut along the diagonal of the rectangles to receive the triangles).

Now you can start working with them. Which figures can you construct?

Enjoy exploring
Cordula

This is one of many variations done by the students of the [AMI 6-12 Assistants Certificate Course](#). What shapes will you explore? The template is on the next page, have fun!
